

CLAIMS

1. A liner for connecting a prosthesis with the stump of an amputated lower leg, comprising a stocking from a substantially flexible material for surrounding the stump with a first, open end for receiving the stump therethrough, and a second, closed end which is, on the outside, provided with coupling means for coupling to the prosthesis, wherein the stocking is,
5 on the inside, provided with a substantially form-retaining disc for supporting the end of the stump, and wherein the substantially form-retaining disc is substantially non-round in a view from the open end of the stocking.
- 10 2. A liner according to claim 1, wherein the substantially form-retaining disc is substantially oval in the view from the open end of the stocking.
3. A liner according to claim 1 or 2, wherein the substantially form-retaining disc is substantially triangular in the view from the open end of the stocking.
- 15 4. A liner according to claim 3, wherein the corners of the substantially triangular shape are rounded.
5. A liner according to any one of the preceding claims, wherein the substantially triangular disc is arranged for supporting the tibia with a part which is located near a corner of the triangle.
- 20 6. A liner according to any one of the preceding claims, wherein the substantially triangular disc has a substantially cup-shaped design.
